

The bigger count is not the bigger rate.

Morning workshop

75%

$30 / 40 \times 100 = 75\%$

Evening workshop

80%

$20 / 25 \times 100 = 80\%$

A complete comparison

The morning workshop had more completions, 30 versus 20. The evening workshop had the higher completion rate, 80% versus 75%.

The gap is 5 percentage points. These invented counts do not tell us why the groups differ. Avoid claiming that the workshop time caused the difference.
