

Better photos. One window.

Photograph your handmade work with a phone, a sheet of paper, and daylight.

01 Set up beside a window

Turn off room lights. Place your object on plain paper.
If sunlight makes hard shadows, try a sheer curtain.

02 Check the frame

Clean the lens. Tap the object to focus and adjust exposure.
Leave space around the edges for different crops.

03 Make a set

Take a front view, a detail, and a photo that shows scale.
Use the shot-list worksheet to plan the rest.
