

Save the view. Keep the context.

Saved filters for the issue list

DECISION FOR 8 OCTOBER

Approve personal saved views for the first release.

Owner: product lead / Reviewers: design + engineering / Status: proposed

■ Problem

A user who triages the same queue each morning must rebuild its filters. The spec assumes repeat use; validate that assumption in the pilot.

■ In scope

Save a name, filters and sort order. List personal views. Rename or delete a view. Show an empty state when nothing matches.

■ Outside this release

Team sharing, scheduled exports and notifications. Existing issue permissions still apply.

Acceptance checks

01 Names are explicit

Require 1 to 60 characters after trimming.

02 Failure keeps the work

If saving fails, keep filters and entered name.

03 Permissions win

A saved view never grants access to an issue.

Open question: should duplicate names be allowed? Bring a recommendation to the review.
